PROFILE

PhD candidate transitioning into **data analyst roles**, with strong capabilities in **data analysis**, **complex problem structuring**, and **insight generation**. Experience in needs analysis, process modeling, and project management, applied to **data-driven decision making**. Proficient in analytical tools (R, Python, SQL in progress) and data-oriented workflows.

Keywords: data analysis, business analysis, data visualization, statistics, SQL, Python, R.

EXPERIENCE

Université Paris Sciences et Lettres — Paris
PhD Candidate – Data analysis and complex data structuring — 2023-2026

- Built and structured a **multi-source dataset** (hundreds of entries): data cleaning, normalization, and disambiguation.
- Designed a **relational and graph data model** (SQLite, Neo4j) to represent complex entities (works, editions, actors, relationships).
- Developed analytical workflows in **R** (tidyverse): data transformation, aggregation, and exploratory data analysis (EDA).
- Produced **reproducible analytical reports** (Quarto): structured outputs, data visualization, and interpretation.
- Analyzed relationships between entities (graph approach) to identify structures and patterns.

Data Projects

Data structuring and modeling
Designed relational and graph databases (SQLite, Neo4j), integrating and normalizing multi-source data.

Exploratory analysis and reporting
Processed and analyzed data using R (tidyverse), producing reproducible analytical reports (Quarto).

Université Paris Nanterre — Nanterre
Teaching Assistant – Data analysis and modeling — 2025

- Taught **experimental logic** and **variable formalization** (independent vs dependent variables).
- Introduced **data modeling concepts** and relationships between continuous and categorical variables.
- Trained students in **applied statistical methods**: t-tests, ANOVA, linear regression (OLS), principal component analysis (PCA).
- Supervised **data analysis, interpretation, and reporting** (APA standards).

Université Paris Lumières — Campus Condorcet
Operations Manager – Process analysis and optimization — 2023

- Analyzed and optimized **organizational processes** (admissions, academic management, HR), coordinated multiple stakeholders and managed operational activities.
- Designed monitoring tools and **key performance indicators (KPIs)** to support decision-making.
- Structured and improved reliability of data flows.

OBJECTIVE

Target: internship / full-time role in data analysis or business analysis. Data analysis, dashboarding, decision support, process optimization, and KPI-driven management.

SKILLS

Data analysis
Data cleaning · EDA · Descriptive statistics · Statistical analysis (R, Jamovi, Stata) · Modeling · Reporting

Data tools
R (tidyverse, ggplot2) · Python (pandas, basic) · SQL (in progress) · Neo4j · Jamovi · Stata

Environments
RStudio / Posit · Jupyter Notebook · VS Code

Business analysis
Needs analysis · Process mapping · KPI · Continuous improvement

Tools
Git · GitHub · Excel / Google Sheets · Notion · Trello

Languages
French C1 · English C1 · Ukrainian C2 · Russian C2 · Greek B2

EDUCATION

EPHE-PSL / UCLouvain
PhD – History (ongoing)
Since 2023 · PSL University (⋆ top 50 worldwide)

EPHE-PSL
Master's degree – Civilizations, cultures, societies
2022–2023 · Highest honors (18.10/20)

Université Paris Nanterre
Bachelor's degree – Psychology

CERTIFICATIONS

2024 — Cypher and Graph Data Modeling (Neo4j GraphAcademy)
2024 — Introduction to R (EPHE-PSL)
